

# Our Commitment

We realize that many of our projects contribute towards an improved environmental and social footprint. Now we aspire to integrate the Sustainable Development Goals (“SDGs”) of the United Nations into these projects moving forward. Using them as our guiding light, we can target our resources in a more focused manner to achieve further improvements across our operations.

### Affordable and Clean Energy

- ✓ Research and development on the possibility of using alternative fuels from unwanted solid waste so as to provide cleaner energy and help to manage waste

We will use SDG goal 7 targets and indicators specifically around increasing renewable energy sources and improved energy efficiencies as our guidance.

7 AFFORDABLE AND CLEAN ENERGY

### Decent Work and Economic Growth

- ✓ Safeguarding our employees by providing a zero-harm workplace
- ✓ Adopting a diverse and inclusive employment approach to attract the best talent
- ✓ Offering tailor-made training that best develops the potential of our employees

8 DECENT WORK AND ECONOMIC GROWTH

We see indicator 8.2 as a relevant guide: Achieve high levels of economic productivity through diversification, technological upgrading and innovation, including through a focus on high-value added and labour-intensive sectors

### Responsible Consumption and Production

- ✓ Striving for sustainably - sourced key materials gypsum, flyash, glass to avoid overuse of raw materials
- ✓ Increasing energy efficiency across supply chain including sourcing, manufacturing, packaging and logistics
- ✓ Reducing water consumption and achieve zero waste in production process

We will continue to address resource usage and refer to 12.2 and 12.5 as we move forward

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

### Climate Action

13 CLIMATE ACTION

- ✓ Support for innovative solutions to reduce emissions such as reducing the volume of limestone in cement, the use of low-sulphur raw materials, a low NOx burner and an electrostatic precipitator

- ✓ Support for carbon-trading schemes and the purchase of carbon credits to offset emissions

With reference to the targets we will focus on our organizational capacity to address awareness, strategy development and planning around mitigation and learn more about adaptive capacity and resilience to climate change impacts

We are proud to bring in more innovative ideas and technology to meet the challenges of this new era and will continue to contribute to build a green island with a team of staff who are happy and proud to be here at GIC.
